SUMMARY

Senior Software Engineer with 10+ years of experience building full-stack web and mobile applications across agency, healthcare, and enterprise environments. Specializes in complex SaaS platform architecture, React/TypeScript frontends, Node.js APIs, and React Native mobile apps for production deployment. Early adopter of agentic AI development workflows, leveraging Claude Code and multi-agent automation to accelerate delivery at the engineering team level. Anthropic Certified Claude Architect.

EXPERIENCE

Senior Software Engineer (Remote)

Mar 2021 - Present

Synapse Studios

Full-stack engineer across multiple client engagements at a software agency, working in cross-functional teams ranging from 2 to 10+ engineers across healthcare technology, sporting goods, and e-commerce verticals.

- **Helia (current)** - Core engineer on a multi-tenant B2B SaaS platform digitizing the surgical supply chain lifecycle, connecting suppliers, distributors, facilities, and health networks. Working across a Yarn workspaces monorepo with a Hapi/Knex/Elasticsearch Node.js + TypeScript API, SQS-driven workers, and a separate NestJS backend service, paired with a React 18 + Vite frontend (Redux, React Query, Fela), orchestrated via Docker Compose alongside a dedicated authenticator and AAT suite. Supports contract negotiation, OR-day implant tracking with unit-level serial/lot/expiration records, role-gated multi-party approval workflows, invoicing, and payment reconciliation with immutable billing snapshots. Delivered HeliaConnect, a companion React Native mobile app built for field reps in low-connectivity hospital environments, with on-device SQLite item databases. Integrated Pusher websockets, Firebase FCM, AWS Lambda/S3, QuickSight spend dashboards, and optional ERP/SFTP pipelines.
- **PING Ballnamic** - Contributed across the full stack of ballfitting.com, a proprietary algorithm-driven golf ball fitting platform engineered by PING. Built and shipped customer-facing features including an Apple Pay/Braintree payment integration, a teaser paywall, animated loading experience, and a 6-iron/7-iron questionnaire toggle with supporting DB migrations and API changes. Improved backend performance with a paginated fitter results API and server-side caching layer. Maintained CI/CD pipelines and infrastructure via Terraform, Docker, and CircleCI.
- Shipped a high-volume D2C e-commerce platform serving a large and loyal consumer base across a diverse product catalog.
- Built an on-demand consumer wellness platform connecting clients with mobile service providers.
- Mentored a junior developer through full project ownership, leading structured knowledge transfer and a deliberate handoff to independent ownership.
- Leveraged agentic AI development workflows via Claude Code, including custom multi-agent automation, MCP server integrations, and GitHub issue-to-PR pipelines, to accelerate delivery and reduce repetitive engineering overhead.

Software Developer

2019 - 2021

Health Street - Cleveland, OH

Full-stack developer on a three-person engineering team supporting a nationwide drug testing, background screening, and DNA testing platform serving 5,000+ clinic locations.

- Built and maintained the customer-facing ordering pipeline using React, enabling users to select, schedule, and complete purchases for drug tests and background screenings across a compliance-regulated, legally sensitive domain.
- Contributed to the early-stage development of GLASS, a proprietary internal SaaS platform for managing screening records, results, and client data.
- Supported ongoing full-stack development and AWS deployment of health-street.net across a PHP, WordPress, Node.js, and React stack.

Software Developer

2015 - 2019

SapientRazorfish (now Publicis Sapient) - Cleveland, OH

Junior developer at a global digital agency, embedded in large cross-functional teams serving Fortune 500 clients across e-commerce and retail verticals.

- Contributed to Sherwin-Williams' live B2C e-commerce storefront built on Java/WebSphere Commerce, with work spanning the cart and checkout pipeline, on-site search results, and front-end performance optimization.
- Supported development of a B2B wholesale portal integrating via SOAP-based web services to deliver a separate purchasing experience for trade and contractor clients.

EDUCATION

Bachelor of Science in Computer Engineering

2010 - 2015

The University of Akron - Minors in Mathematics and Computer Science

PERSONAL PROJECTS

- **gifdaddy** - gifdaddy.vercel.app - Browser-based animated GIF editor built with React, TypeScript, Konva.js, and FFmpeg.wasm. Fully client-side with no backend or paid services; all encoding and processing runs locally in the browser, deployable as a static GitHub Pages app.
- **Godot Idle RPG** - An in-development idle RPG built in Godot 4 featuring a full zone progression loop, tiered gear system, and a prestige/ascension mechanic with a designed super-ascension paradigm shift at the endgame. Includes a Slay the Spire-inspired shop system and a hexagonal talent tree.
- **Chess Variant** - An in-development desktop and mobile chess game built in Godot that layers arcade-style mechanics onto traditional chess rules, including custom piece fusion combinations and environmental hazards.
- **Project Hierarchy Explorer** - VS Code extension that generates a human-readable text output of a project's file structure. Published to the VS Code Marketplace.
- **Personal Website** - jakedemian.dev - A developer portfolio built with React, TypeScript, and Chakra UI, featuring an animated skills chart, a terminal-style about section with a live-ticking age display, and Jest test coverage. Hosted on Vercel.
- **Sapphire Lake** - A shipped 2D fishing game with pixel art graphics, built in Unity and published to itch.io.

SKILLS

Languages	TypeScript, JavaScript, PHP, C#, Bash
Frameworks	React, React Native, Hapi, NestJS, Next.js, Expo, Knex, Redux, React Query, Vite
AI & Agentic	Claude Code, MCP Servers, Multi-agent workflow automation, LLM integration
Infra & Data	AWS (Lambda, S3, SQS, QuickSight), Docker, Docker Compose, PostgreSQL, SQLite, Elasticsearch, Redis, Firebase FCM, Pusher
Tools	Git, GitHub, Vercel, VS Code, JetBrains, Yarn
Certifications	Anthropic Certified Claude Architect (CCA) - Foundations
